

Landgren of Sweden is a family-owned real estate company with 12 locations across southern Sweden. A recent move to Microsoft 365 has helped the company, which has no internal IT, meet its compliance obligations with Europe's General Data Protection Regulation (GDPR) legislation. Landgren has also increased collaboration and mobility through the use of Microsoft SharePoint Online and Yammer. This has led to an increased number of sales wins, as Landgren can often reach out to customers faster, deliver more information quickly, and provide and sign documentation during a property showing.

"The greatest value Microsoft 365 provides a company like Landgren is that you don't have to think about anything. Everything is so sophisticated, you can put it out of your mind and focus on your customers."

— **Peter Landgren, CEO, Landgren**

"With SharePoint Online, we can easily give customers stats or information about a property or the market, the moment they ask."

— **Hampus Kjellberg, COO, Landgren**
