

Life sciences leader unites global workforce, breaks down technology barriers with SharePoint and Yammer

Thermo Fisher Scientific is the world leader in serving science, headquartered in Waltham, Massachusetts. Following a large acquisition, the company found itself with two intranets—neither of which fully supported employee needs. Thermo Fisher deployed Microsoft Office 365 and developed a single intranet solution based on SharePoint Online and Yammer. Now, employees across the company can store and coauthor documents in the cloud, access company information in a unified location, and connect with colleagues globally.

“With our new intranet, I’ve never felt more connected to my colleagues. We’ve opened up new lines of communication, and we work as one global organization more than ever.”

Brian Duke, Senior Manager of Intranet Solutions, Thermo Fisher Scientific
